

Milestone #4 HTML Project consists of 7 different documents with functioning links and content which includes multiple images, a twitter embedded video, drop down form, and list.

I wanted the drop-down area to be part of the navigation but since I didn't know how to make it work in javascript, I left it in as I'd like to come back to it once I have some experience in Javascript. This dropdown form requirement is not yet in final form.

The sitemap is mostly the same except for a name change from projects.html to works.html, as it would have been confusing to tell the difference between the home page and the links to my works.

The social media section has been condensed into the about page to keep things less filled with unnecessary white space.

19.    <p>I started on my own original manga, or Japanese comic, as I tried to enter one of the contests that was coming up at the end of the year. Unfortunately, I made too many mistakes and ended up scrapping my work. It was not all bad, as I learned from my mistakes and know what to do and what to look out for in my next project.</p>

22.    
23.    <p>The total time it took to make this entire one-shot was a little over 3 months, with a few breaks here and there, and on my days off of work. I knew from the very beginning I was going to have some problems with drawing backgrounds and backgrounds. I had to constantly change them as I drew on the rough draft of the one-shot. Most of the story was going to be short, so I started thinking about the plot holes and other things the readers and judges might question as they continued reading throughout the story. The original story was going to be a 20 something paged gag comic about an elf and their adventures with their friends, what was then fleshed out into an over 50 paged story about how they and their friends plan to free their fellow elf family from Santa, who chases the elf from the north pole into New York City, where the elf meets another friend who helps them defeat Santa's army of gnomes and goblins.</p>

<p>I never expected myself to go into album work, since I didn't really have any influence from other artists. This was the oddball that I accepted once I had made friends with a couple of folks who wanted to pursue making music. I wanted to make an album similar to what I did with my first piece, my first film, given the creative freedom of coming up with whatever I felt would have worked with his song. The title of the song was "moncler" so of course the very first thing I did was research the company and then I took into consideration of what was said into lyrics and styled it off that and the references I used in my research.</p>
<p>I did a lot of sketches and I had some limitations on what my client wanted. I drew up multiple drafts first on paper, while asking them what type of person they were and what they were looking for in this design. With some of my designs I was showing, my client became hooked onto the "melting" design and we went with that as the baseline of the design. Afterwards, I finished up the sketch, remade it in digital and did a few extra tweaks and then asked what they would like to do with the background. We then settled on a psychedelic theme and I went from there. Most of the design including the font and extra subtle piece were added which the client was very happy with.</p>

<p>Backgrounds are a very important piece to drawing manga. They immerse the reader even further with the amount of detail the artist puts in. When I originally started reading comics, I never paid much attention to it as much as I do today. In fact, even when I read new chapters of my favorite series, I make sure to take the time and really appreciate the hard work that the artist has taken into drawing backgrounds for the most crucial parts of the chapter. Each detail matters and I always try to pay attention to them. I also pay attention to the backgrounds in manga where I can. I have a camera that I can take photos of the backgrounds and then use them in my drawings. This would help me build up the confidence I was looking for when creating backgrounds on my own. At first I used multiple different images of the resolution and I wasn't able to zoom in on specific parts of the image and redraw them with more precise content.</p>
<p>Afterwards I practiced on using screen tones for building the effect of showing different shades and color of the surrounding areas. I used darker shades of screen tone for the areas closer to the ground and lighter shades of screen tone for the areas further away. I also used multiple shades of the same color in the same area to create an effect that made the subject look more dynamic.</p>
